Professional Experience

SenseMesh — Palo Alto, CA

Lead Frontend Engineer — Feb 2025 – Aug 2026

Early-stage security technology startup developing AI-powered monitoring software for cameras and drones

- Architected a React SPA, establishing reusable data-fetching patterns and type-safe API integrations adopted by other engineers
- Introduced Storybook across the application, enabling designers to independently explore components, refine interactions, and collaborate on UI development
- Built the primary chat-first interface using LLM tool calling, enabling natural-language detection searches and security workflows with seamless transitions to traditional forms for refinement
- Developed a video pipeline using NATS, FFmpeg, and LL-HLS, enabling low-latency browser playback and on-demand viewing through Google Cloud Storage
- Established the initial gRPC architecture using Protocol Buffers and Envoy, providing strongly typed APIs across frontend and backend services
- Integrated Ory for identity management and implemented RBAC with tenant-scoped data access across public and internal services

Offset Partners — Napa, CA

Senior Software Engineer — May 2021 – Oct 2024

Digital agency building custom websites, e-commerce experiences, and content management software for wineries

- Rebuilt and redesigned the product dashboard in React, launching a block-based CMS adopted by new and existing winery clients
- Modernized a legacy PHP/jQuery frontend with Webpack and route-aware asset loading, reducing build times by ~80% and eliminating unnecessary JavaScript delivery
- Refactored an in-house PHP MVC framework, restructuring application routing and shared utilities while consolidating duplicated code
- Optimized MySQL queries within a legacy data architecture, improving API response times by ~50%

Junior Software Engineer — Jul 2019 – May 2021

- Replaced FTP-based development workflows with Dockerized local environments and GitHub Actions CI, enabling independent development and automated code-quality checks
- Collaborated with winery stakeholders and designers to translate business requirements into customer-facing interfaces

Technical Skills

- Languages: TypeScript, JavaScript, Go, PHP, SQL, Swift, Lua
- Frontend: React, TanStack Query, TanStack Router, TanStack Start, Next.js, Remix, Vue, Storybook, Vite, Webpack, Tailwind CSS, SCSS, Less, CSS, HTML
- Backend: Node.js, gRPC, ConnectRPC, GraphQL
- Data & Infrastructure: PostgreSQL, MySQL, MongoDB, Redis, Docker, Kubernetes, Terraform, Pulumi
- Tooling & Observability: GitHub Actions, OpenTelemetry, Grafana, VictoriaMetrics
